Logo guide · everything that matters, in two pages

THE MARK

Four drawings, and they are not interchangeable

Strata is a filled disc. Unlike an outline mark it does not survive a dark background — it disappears. And below roughly 22 pixels its three internal layers close into a single dark blob. Both problems are solved by drawing, not by CSS. Pick the right file for the context.

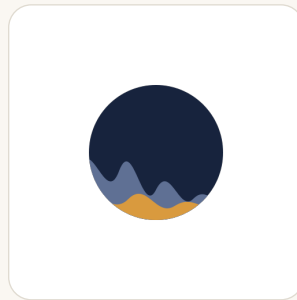

Primary

Light grounds. The default.

Reversed

Dark grounds, navy panels, photography.

Small

Under 22px. Favicon, tabs, list rows.

App tile

iOS and Android icons, avatars.

CLEAR SPACE & MINIMUM SIZE

Keep empty space on all four sides equal to the height of the amber base band — about a quarter of the mark's height. Never place the mark on a busy photograph without a solid or heavily darkened panel behind it. Minimum size for the primary mark is 22px; below that, switch to the simplified drawing.

NEVER

- ✗ Outline it, or add a shadow or glow.
- ✗ Rotate, stretch, skew or crop it.
- ✗ Recolour the amber, or drop it — the settled base line is the whole idea.
- ✗ Put the primary mark on a dark ground, or the reversed mark on a light one.
- ✗ Rebuild the wordmark in a different typeface.

COLOUR

Two ambers, deliberately

The amber is an accent, not a text colour — at body sizes it fails WCAG AA contrast. Use Amber for fills, rules and the base band; use Amber Ink whenever amber has to be read as words.

Midnight

#17233D

Headings, mark base

Deep blue

#2E4372

Buttons, links

Mid blue

Page background

TYPE

Fraunces and Inter

Headings in Fraunces — a soft serif with a humanist skeleton, warm rather than institutional — set lowercase at -3.8% tracking for the wordmark and -1.5% to -2% elsewhere. Body text in Inter. Both are open source and free; install from Google Fonts. Never substitute another serif for the wordmark.

WHAT'S IN THIS KIT

svg/

Six vector files. Use these wherever vectors are accepted.

png/

22 transparent PNGs: each mark at 256/512/1024, the app tile at 180/512/1024, favicons at 16/32/48/64.

lockup-export.html

Open in a browser to export mark-plus-wordmark lockups as transparent PNGs at any size. The wordmark is live text, so it can only be rendered where Fraunces loads — which is why it isn't pre-baked.
